Poverty and Proximate Barriers to Learning: Vision Deficiencies, Vision Correction and Educational Outcomes in Rural Northwest China, ScienceDirect, 2012

EXECUTIVE SUMMARY

This was a defining year for VisionSpring and for the global eye health movement. Amid profound disruption in international development stemming from the dissolution of USAID, we not only weathered the storm, but entered a new chapter of expanded impact. Four years after setting an ambitious goal to double our impact, we surpassed it.

In 2025, together with our partners, we screened the vision of 4 million people and corrected the vision of more than 2.7 million people with eyeglasses. That brings us to more than 16.7 million people whose lives are brighter, safer, and more prosperous because they see clearly. By accelerating the uptake of a centuries-old innovation, we have unlocked \$3.6 billion in earning potential for low-income households.

A series of milestones made 2025 truly remarkable.

Bloomberg Philanthropies selected VisionSpring as one of the anchor partners in its landmark \$75M Vision Initiative—one of the largest philanthropic commitments ever made to eye health. Their investment validates the evidence-backed, community-based, multi-channel approach we have built over the last decade.

Our research proved a core principle of our model: creating first-time access to eyeglasses spurs lasting demand. Five-plus years after receiving their first pair of VisionSpring glasses,

93% of customers surveyed in India were still wearing glasses, two-thirds of whom purchased replacement pairs at market prices.

As an animator in the global movement to close the clear vision gap with glasses for 1 billion people, we celebrated systems change wins. India reduced taxes on glasses after years of coalition advocacy. UNICEF added VisionSpring glasses to its Supply Catalogue for governments and NGOs worldwide. And, our research helped underpin “[The Value of Vision: The Case for Investment](#)” which calls on governments to take action.

As organizations and governments look to incorporate eyeglasses in their primary care services, we have established VisionSpring as their go-to partner with the development of our technical assistance model, CatalEYES.

In 2026, we will celebrate our 25th anniversary and kick off our 2030 Strategy (see page 9). I have never been more optimistic. More partners and funders are joining the movement, and, with you by our side, we will close the clear vision gap in our lifetime.

Onwards together,

Ella Gudwin | CEO

MISSION

To increase lifelong earning, learning, safety, and well-being through eyeglasses for people vulnerable to poverty.

GOAL

Everyone who needs eyeglasses will have them by 2050.

CUMULATIVE IMPACT

 **\$3.6B**
in income earning potential unlocked

 **16.7M**
people with eyeglasses

POSITIONED FOR WHAT'S NEXT

How a windfall gift set us up for a major investment and the next chapter to get 20 million people into eyeglasses in just five years.

2022

• BUILDING
• INFRASTRUCTURE
• FOR SCALE
▼

In 2022, MacKenzie Scott's \$15M unrestricted gift gave VisionSpring the freedom to make a deliberate choice: invest in direct delivery and in the infrastructure to scale at the same time. We allocated funds to screen the vision of almost a million workers largely engaged in vision intensive artisan craft and agriculture such as tea, coffee, cocoa and vanilla. We also invested in adding expertise to our team, strengthening our systems, diversifying our supply chain, and building the evidence base that quantifies what eyeglasses do for people living in poverty. We operated with a growth mindset, accepting intentional deficits in the near term to build long-term capacity to deliver on larger grants.

2025

• HARNESSING OUR
• CAPABILITY FOR
• LARGER INVESTMENTS
▼

In 2025, the precedent-setting \$75M Bloomberg Philanthropies Vision Initiative launched. We were one of several implementing organizations, and an anchor for sight tests and eyeglasses dispensing in Bangladesh, Nigeria, and India. Over the past year and a half, new funders have joined and deepened their investment in VisionSpring, reflecting growing confidence in eyeglasses as a proven poverty intervention, and the unparalleled reach we are now able to deliver. This would not have been possible without the foundation that we have built in recent years. But as VisionSpring has grown, unrestricted funding has become a smaller share of our overall budget—less than 30%. That is a consequence of how our recent scale has been financed—and one that makes the continued commitment of our long-standing unrestricted philanthropic supporters especially important to our future impact.

2026-2030

• ACCELERATING TO REACH
• THE NEXT 20M PEOPLE
▼

That brings us to what comes next. It took us nearly 25 years to reach 16.7 million people with clear vision. Our 2026-2030 strategy, adopted by our Board of Directors this year, commits us to reaching 20 million more in just five years. With eyeglasses established as a scalable livelihood intervention, and our value chain and growth enablers in place, we've organized our strategy around the three Big Bets that will help close the clear vision gap by 2050.

▼ OUR BIG BETS

CLOSING THE VISION GAP WITH THREE BIG BETS

One billion people need eyeglasses and do not have them. No organization can close that gap alone. Working at the scale that the problem demands requires mobilizing partners, shaping markets, and engaging governments.

Our three Big Bets to solve the problem within a generation reflect where VisionSpring has influence matched with where markets are in their journeys toward glasses being available, desired and sustained without us.

BIG BET 1

Scale Up Vision Access Services

We are concentrating our Vision Access Programs in geographies where we can stimulate market formation among lower-income customers, particularly through informal and formal workplaces. We're testing a hypothesis: that refractive error coverage has a tipping point, past which expensive "push" delivery gives way to faster, cheaper customer-led "pull." Most communities we serve sit at less than 20% coverage today. We want to find out what happens at 40%. By screening and dispensing glasses directly, we also stay accountable to customers and generate the operational learning and evidence of impact that informs our other bets. This is our impact and learning lab.

...see page 10

BIG BET 2

Expand with Partners & Retail

We are extending VisionSpring's reach through pharmacies, community health networks, primary care, and livelihoods programs that serve our target markets. We know that getting glasses to people is only half the challenge. Getting people to want them, trust the source, and buy them requires more. Leveraging CatalEYES™, we provide demand and supply-side technical assistance to our partners so they can succeed – offering training, program design, a supply of fit-for-purpose glasses, and demand generation strategies that convert. As our primary care and community-based network grows, we touch people and sectors that we could never serve alone.

...see page 13

BIG BET 3

Accompany Government as Payer@Scale

Philanthropy takes risks and demonstrates what's possible, but governments have the budgets, infrastructure, and mandate to sustain vision care for people vulnerable to poverty. As more governments adopt the WHO SPECS 2030 strategy, we are helping them integrate eyeglasses into public health and social welfare systems by supplying quality glasses in volume, providing technical assistance to deploy budgets effectively, and advocating for the policies that make vision care a standard part of primary care. We meet governments where they are on their journey, from early exploration to national financing and roll-out.

...see page 16

2026-2030 STRATEGY

Our 2026-2030 strategic plan, adopted by our Board of Directors this year, sets the course for what we believe is achievable within a generation.

STRATEGIC GOAL

20 million

people vulnerable to poverty improve their livelihoods with eyeglasses.

VisionSpring concentrates channels in key geographies to increase market penetration, demand for glasses, and efficiency; and expands delivery through partners and governments with the potential for scale.

Success looks like:

- Service delivery = smaller %
- Partner delivery = growing
- Government delivery = scaling
- People with clear vision = exponential

MISSION MEASURES

1. Value of new sustained earning potential
2. First time wearers
3. Gender parity (with gender-informed channels)
4. Future: Eyeglasses coverage rate
5. Future: Market value created

KPIs:

Corrective glasses

People screened

Total cost per pair of glasses

Points of sale/service

People trained

BIG BETS matched to market readiness

1. Scale up vision access services

- Deliver vision service w/ geo-concentration
- Focused on *See to Earn, See to be Safe*
- Establish best practices
- Last mile supply of glasses

2. Expand with partners and retail

- Enable scale-ready partners to deliver
- Focus on community-based services
- CatalEYES technical assistance
- Wholesale supply of glasses

3. Accompany government as Payer@Scale

- Unlock gov't capacity and financing
- Focused on primary care systems
- CatalEYES technical assistance
- Wholesale supply of glasses

VALUE CHAIN

Last mile service delivery

High quality, cost-effective VAP

Demand generation

Evidence-driven glasses conversion and uptake

Preferred technical assistance partner for vision access solutions

Global supply chain delivers

Fit-for-purpose glasses offering

Evidence

Rigorous studies and data systems inform best practice and advocacy

Systems change

Policies and resource flows increase eREC

STRATEGY ENABLERS

Financial resources:

Deepen philanthropy, corporate fundraising, and pursue large-scale and co-funding opportunities, including with government as payer.

People & culture:

Develop & retain diverse, proximate team w/ skills to deliver, catalyze and influence, and an org structure and culture that fosters agility & inclusion.

Org effectiveness:

Integrated systems and technology, and lean processes, drive operational effectiveness, financial management, compliance and accountability.

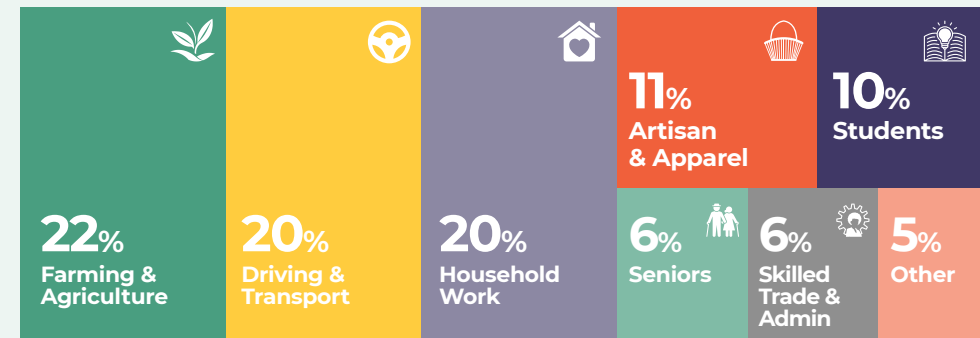

BIG BET 1:
**Scale Up Vision
Access Services**

Reaching Last-Mile Customers to Provide Their First Pair

In 2025, Vision Access Programs (VAP) screened the vision of 1.9m people, correcting sight for 487k across eight countries.

- *See to Earn*, which reaches working-age adults whose livelihoods depend on what they can see, corrected the vision of 344k.
- *See to Learn*, which gives students and teachers the clear vision they need to succeed in school, corrected the vision of 49k.
- *See to be Safe*, which corrects the vision of drivers and transport workers on roads where poor sight costs lives, corrected the vision of 94k.

Customers by Occupation

1.9M people's vision screened

487k people with clear vision through eyeglasses

80% working-age adults between 35-64 years

81% first-time wearer rate

Exceeded Targets by 15% Across *See to Earn* Channels

In 2025, *See to Earn* screened the vision of 1.1m working-age adults and corrected the vision of 344k across three channels: *Community Outreach*, *Livelihoods in Focus*, and *Clear Vision Workplaces*. Farmers and agricultural workers made up 37% of those reached through *Livelihoods in Focus*, which embeds vision services into coffee, tea, cocoa, and flower value chains. We also reached seniors, homemakers, and community members in surrounding communities.

Our *Clear Vision Workplaces* program had a landmark year, reaching nearly 70k garment workers across Bangladesh, Vietnam, India, and Kenya. New collaborations spurred growth:

- MoU with Bangladesh Garment Manufacturers and Exporters Association (BGMEA) unlocks access to 3k member factories
- BRAC Bank invests in vision care as a workplace benefit, screening 46k workers
- New Cambodia collaboration launched with Deckers Brands

“People Fixing the World”

In Karnataka, India, BBC accompanied VisionSpring's team, interviewing coffee farmers who received eyeglasses. The episode showcased how vision correction boosts agricultural productivity and income in rural communities, bringing our *See to Earn* work to a global audience.

[Listen to the story](#)

Screened One Millionth *See to be Safe* Customer and Replicated in Bangladesh

Since its launch in 2015, *See to be Safe* has screened the vision of one million drivers and transport workers—people who carry passengers, goods, and livelihoods along roads where poor vision can be fatal. In 2025 alone, we corrected the vision of 94k drivers across Nigeria, India, Zambia, and Bangladesh, reaching nearly three times our original target.

The program's momentum this year was significant. An anonymous donor's \$750k grant expanded our screening ambitions more than twofold mid-year. In Nigeria, 65k drivers received eyeglasses through formal partnerships with the Federal Road Safety Corps and the National Transport and Road Workers Union. Through the Bloomberg Philanthropies Vision Initiative, *See to be Safe* was replicated in Bangladesh for the first time, working through the Bangladesh Road Transport Owners Association and the Dhaka Transport Coordination Authority.

At the 4th annual Vision and Road Safety conference in Delhi, VisionSpring joined Mission for Vision, India Vision Institute, and Sightsavers India to align more than 100 leaders around vision care as a road safety imperative. In 2026, as the UN convenes its High-Level Meeting on Road Safety, VisionSpring, as a part of the UN Friends of Vision, is advocating for vision correction to be recognized as a core road safety intervention.

Adopted DigitEYES™ Across All Markets and Added Time-Saving Functionality

DigitEYES™ is VisionSpring's proprietary data capture platform, replacing manual pen-and-paper processes at vision outreach camps with efficient digital workflows that operate even without internet. In 2025, the rollout reached its final markets, completing a journey that began in India in 2022. With every market now on the same platform, VisionSpring can compare program performance across countries in real time, spot what is working, and replicate faster. Data processing that once took 30 to 180 days now happens in under three days.

BIG BET 2:

Expand with Partners & Retail

Enabling Scale-Ready Partners on the Path to a Billion

This shift toward partners and retail has yielded significant results for years. Our Community Agents channel, traditionally our largest, continued to accelerate rapidly in 2025, screening the vision of 2.13M people and selling 761k pairs of reading glasses through our *Reading Glasses for Improved Livelihoods* (RGIL), Pharmacy, and Primary Health Centre channels. This growth is driven by a maturing ecosystem of partners who are increasingly eager to integrate near vision services, supported by a more favorable regulatory environment and new interest from both funders and international NGOs.

 **2.13M** people screened

 **761k** pairs of reading glasses sold

Expanded RGIL Footprint Across Bangladesh and Africa

Reading Glasses for Improved Livelihoods (RGIL) remains the largest driver of Community Agents sales, delivering 633k pairs in 2025 through partner networks in Bangladesh and across Africa.

- **Bangladesh:** RGIL achieved 174% of its target, with community health workers affiliated with the BRAC Health Program, BRAC Microfinance, and the SAJIDA Foundation selling 487k pairs.
- **Africa:** Partnerships with trusted faith-based networks, including the Council of Churches in Zambia, the Malawi Council of Churches, and the Church of Uganda, delivered 142k pairs, reaching 135% of target. First-time wearer rates averaged 64%, and the trust inherent in these networks accelerated mobilization.

Raised Purchase Conversion by 19 Percentage Points in Bangladesh RGIL Camps

In partnership with BRAC, we piloted strategies to improve outreach camp attendance and purchase conversion in four districts. Guided by behavioral research, we tested new demand generation tactics and sales-focused communication training for field officers. The pilot delivered a 30% increase in average sales per outreach camp. We will roll out the process improvements for dozens of supervisors and hundreds of field officers in 2026.

Multiplied Pharmacy Readers Sales 5x with Ghana ‘Pefee’ Campaign

• • • • In 2025, we sold 66k pairs of reading glasses through our Pharmacy channel in Nigeria, Ghana and Bangladesh. In Ghana, demand generation activities aimed to increase eyeglass sales across 200+ pharmacies around the city of Kumasi. Using behavioral research, the “Pefee” campaign (“So Clear” in Twi language) built awareness of presbyopia and reduced stigma around wearing glasses. Interventions included lifestyle messaging, point-of-sale branding, radio/billboard ads, ‘seeing-is-believing’ events, pharmacist sales training, and a call center. The campaign delivered a 5x increase in sales for participating pharmacies, with demand continuing beyond the campaign period.

Integrated Near Vision Correction into Primary Health Centres in Nigeria

Nigeria’s Presidential Presbyopia Initiative, “Jigi Bola,” is integrating reading glasses into primary health care across 12 states, with VisionSpring responsible for Kwara and Ogun states in coordination with the federal Ministry of Health and state Primary Health Care Development Agencies. In our first six months, we trained staff at 89 Primary Health Centres who dispensed 62k reading glasses, and coordinated a community awareness campaign with the National Orientation Agency.

“Vision screening has become as routine as taking a blood pressure reading. It is a new vital sign.”

Dr. Oteri Okolo | National Coordinator, National Eye, Ear and Sensory Functions Health Programme, Federal Ministry of Health and Social Welfare, Nigeria

Trained Thousands Using New CatalEYES™ Modules

At the Skoll World Forum, we introduced CatalEYES™, a flexible training and technical assistance model built on our 25 years of field experience. CatalEYES™ enables any organization, even outside of eye health, to integrate near-vision screening and reading glasses into their existing programs.

In 2025, we trained more than 4k individuals through CatalEYES™, including pharmacists, community health workers, and nurses. We proved that CatalEYES™ content adapts seamlessly across diverse contexts without compromising training quality. As we move into 2026, CatalEYES™ will make its public debut through virtual Learning Circles, in-market activations, and resources and toolkits available online.

4,193

pharmacists, nurses, and community health workers trained

BIG BET 3:

Accompany Government as Payer@Scale

Unlocking Capacity & Financing for Primary Eye Care

VisionSpring has long supplied eyeglasses to mission-aligned hospitals, vision centers, and NGOs. In 2025, our Institutional Partnerships channel crossed 1M pairs delivered in a single year for the first time, with 795k through private and mission-aligned institutions alone. But the bigger bet is on government. As India's ministries increasingly prioritize vision correction as a health, livelihoods, and road safety intervention, VisionSpring is positioning itself as both a trusted supplier and implementation partner. In 2025, VisionSpring delivered 220k pairs through government tenders, with that work gaining significant traction across India.

 **220k**
pairs delivered through
government tenders

Deepened Government Partnerships Across India

In 2025 in Tamil Nadu, we secured the largest government contract in VisionSpring's history, set to deliver more than 335k pairs over two years. We added tenders in Gujarat and Himachal Pradesh, and extended our MoU in Meghalaya for an additional five years.

The headline commitment came in Rajasthan, where months of relationship-building culminated in the launch of the state's first Eye Voucher Initiative, a three-year, \$9M program to expand access to eyeglasses statewide. In January 2026, VisionSpring was named a lead implementing partner, with runway to deliver up to 1.5M pairs.

Secured Working Capital to Sustain Government Tender Growth

Selling to government partners at scale comes with a working capital challenge: payment cycles are slow and can restrict our ability to take on new tenders. In 2025, Skoll awarded VisionSpring a \$1M no-interest loan—our first program-related investment—to help us navigate these cycles and continue expanding our government partnerships.

Celebrated World Sight Day at 15,000 Feet

In October 2025, Team VisionSpring, led by our founder Jordan Kassalow and supported by local and global donors, trekked through the Himalayas, screening 5k people in Himachal Pradesh's most remote mountain communities. Marking our 20th anniversary in India, the trek generated significant momentum with the state government. The Government of Himachal Pradesh subsequently launched a program to screen 400k schoolchildren.

INDIA TODAY

India Today accompanied VisionSpring on the Himalaya Trek in October. Read about "Why Eyeglasses Are Still a Luxury in Rural Himachal."

SYSTEMS CHANGE

Influence Policies & Global Resource Flows

Leaders from India Vision Institute, VisionSpring Foundation India, VisionSpring, and Sightsavers India, at IAPB IN SIGHT LIVE in Nepal, celebrating the Vision and Road Safety (VARS) coalition's milestone of 2 million drivers' vision screened across India.

Hard-Won Progress on the Road of Advocacy

Closing the global vision gap requires changing the policies, funding flows, and systems that shape how millions of people get access to eyeglasses. VisionSpring has spent more than two decades contributing to that change through building evidence, advocating for reform, and co-founding the coalitions that move the needle. In 2025, that persistent work, alongside a growing global movement, began to crystallize in ways that will shape the sector for years to come.

Proved That Philanthropy Sparks Market Formation

Does a single philanthropic intervention create lasting demand, or does impact disappear when the program moves on? In 2025, VisionSpring conducted “[Seeing Beyond the First Pair](#)” with support from the Livelihood Impact Fund to find out. We surveyed more than 1k customers in India who received reading glasses five to six years ago, and found that the market we helped build is sustaining itself. 93% remain active users, 61% purchased replacement pairs at prevailing market prices, and 32% are still wearing their original VisionSpring pair.

Contributed to a Watershed Moment for Eye Health at the U.N.

At the U.N. General Assembly in New York, the sector convened at ministerial gatherings, coalition roundtables, and foundation forums. VisionSpring was in the room for the [announcement of the Bloomberg Philanthropies Vision Initiative](#), joining peer organization leaders united around a shared commitment to close the global vision gap. Meanwhile, The “[Value of Vision: The Case for Investment](#)” launched at the U.N., drawing on more than a decade of sector evidence including VisionSpring’s [PROSPER](#), [THRIVE](#), and [PROSPER II](#) RCTs, and introducing the first-ever Global Summit on Eye Health, to be held in 2026.

Won Landmark Tax Reduction for Eyeglasses in India

India’s General Sales Tax Council reduced the tax on corrective glasses from 12% to 5% in September 2025, making them significantly more affordable for the 550m Indians living with uncorrected vision. The win came after years of sustained advocacy by VisionSpring Foundation and other eye care NGOs noting that tax barriers keep life-changing eyeglasses out of reach for those who need them most.

The implications reach beyond India. Countries across the globe routinely charge 15% to 25% tax on eyeglasses. This decision is proof of what sustained coalition advocacy can achieve.

SEEING BEYOND THE FIRST PAIR

Advanced Sector-Specific Research Pipeline

PROSPER II RCT measures eyeglasses’ impact on productivity in India’s garment manufacturing sector. Publication in April 2026.

THRIFT RCT examines how reading glasses influence mobile banking adoption in Bangladesh. Manuscript submission expected Q4 2026.

Reached Decision-Makers Through Targeted Media

Pharmacies, Bangladesh

Invested in Leaders Already Among Us

In 2025, VisionSpring launched Lead-From-Within, a structured leadership development initiative designed to prepare high-performing mid-level managers for the next level of responsibility. By investing in the talent already here, we created a pathway that rewards merit, builds capability, and deepens the institutional knowledge that makes VisionSpring distinct.

Rapidly Expanded Team to Support New Project Execution

2025 was VisionSpring's biggest year of growth—in glasses delivered, in partners engaged, and in the size of the team making it all happen. We welcomed more than 60 new colleagues across our global operations, including 59 hired in a concentrated push between May and September to support the ramp-up of the Bloomberg Philanthropies Vision Initiative. Our Bangladesh team crossed a milestone of its own, surpassing 100 team members for the first time.

Team members by region

2025 FINANCIAL SUMMARY

Consolidated financial statement, pre-audit

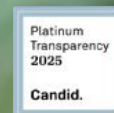

Actual 2025 vs 2024	2025	2024
IMPACT		
Corrective Eyeglasses	2,712,726	2,134,215
SUPPORT AND REVENUE		
Contributions and Grants	\$26,097,984	\$11,240,884
Earned Income	\$2,489,847	\$2,271,667
Less: Cost of Goods Sold ¹	(\$2,005,304)	(\$1,817,660)
Net Earned Income	\$484,543	\$454,007
Investment and Other Income	\$2,246,229	\$1,500,049
Total Support and Revenue	\$30,834,060	\$15,012,599
EXPENSES		
Cost of Program Delivery	\$11,015,443	\$12,559,238
Management & General	\$3,166,577	\$2,153,965
Fundraising	\$1,323,469	\$1,398,990
Total Expenses	\$17,439,287	\$18,245,313
CHANGE IN NET ASSETS	\$13,394,774	-\$3,232,714
Restricted net assets	15,402,678	3,532,612
Unrestricted net assets	22,955,334	21,430,618

¹ Earned income is presented net of the cost of eyeglasses sold. VisionSpring deliberately prices eyewear below cost recovery in many markets so that customers earning less than \$4 per day can afford clear vision. Philanthropic support makes this subsidy possible.

Built for the years ahead. Net assets grew to \$13.4M in 2025, anchored by a landmark multi-year commitment from a lead donor. Nearly all of that growth is restricted, designated for future program delivery. Unrestricted net assets grew by \$1.5M, and that flexible funding remains a critical resource that lets us innovate and stay at the cutting edge of what it will take to solve this problem within a generation.

More impact for every dollar. VisionSpring served 27% more people while total expenses declined 4%, improving the cost per person served.

Building capability for scale and impact. Targeted investments in people, systems, and skills are equipping VisionSpring to execute its new strategy and support rapid expansion.
